

CHARACTER GENERATOR

MC3215X

Technology at your fingertips

The Model MC3215 is our 6th Generation of Character Generators displaying the information as a full page display. This standalone terminal employs a microprocessor and large scale integrated circuits for high reliability and fewer components, with all electronics built into the housing.

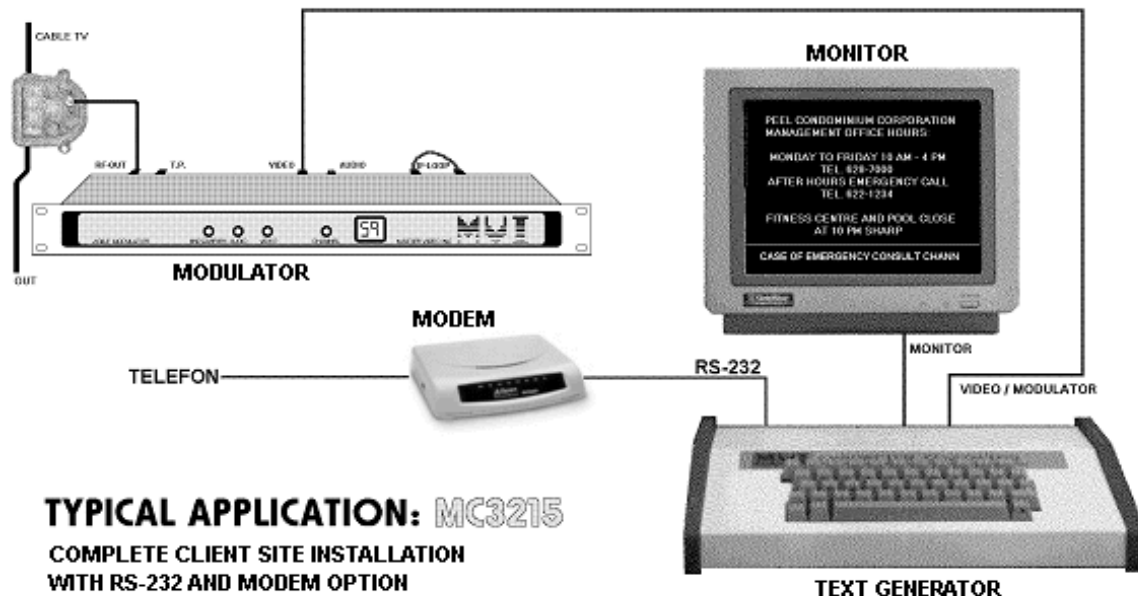

The basic memory of 47 pages has a Ni-Cad battery as memory protection in case of power failure. Applications are info-channels in NTSC or PAL standard for cable companies, hotels and condominiums. The basic memory of 47 pages has a Ni-Cad battery memory protection in case of power failure.

Optional RS-232 interface allows updates via modem or serial port via Win9x/ME/Nt4/2K/XP computer.

The screen displays in the small font mode 17 lines of 32 characters and in the large font mode 13 lines of 21 characters each highlighted by split screen colors. The character set includes upper and lower case, French, Spanish and special characters.

Easy editing features include a help page, which the editor can access any time during updates. Other features besides full cursor control are insert and delete functions and line centering. The random display of pages may be called up in any order up to 96 events. One random page may be selected for the crawl line. For each selected page an individual display time is chosen.

This all adds up to "Technology at your Fingertips".
